| European Program | Lifelong Learning / Transversal Programme/ KA3 ICT |
| Deadline | 31 st March 2010 |
| Deadline for expression of interest | 1 st March 2010 |
| Project title | DIGITAL CLASSROOMS |
| Summary of the proposal | <p>Nowadays, education plays a key role to create a fair, inclusive and respectful society. The 'education for all' concept goes beyond achieving universal schooling; it is about social unity, fighting against inequality, respect to cultural diversity, inclusion and access to a knowledge society that can be achieved through the Information and Communication Technologies.</p> <p>There is a clear attempt from governments and academia to adapt contents, structures and teaching methods to a more personalised education to create a higher quality educational system. Support innovation, research and cooperation among Member States using the ICT is the way to achieve these objectives.</p> <p>That is why we propose a tool that works transversely in the educational field, taking care of all social groups and being aware of all determining factors that should take part in the educational process such as accesibility, multilingualism, equal treatment, hardware, multiculturalism, etc. to achieve the following objectives:</p> <ol style="list-style-type: none">1.- to modify and to enrich the relationship between teachers and students as a response to the changes in current society, encouraging the use of ICT.2.- to work, from the very early ages, on aspects such as cultural diversity, increasing the social relations with students from other countries, promoting bonds with other cities to raise friendship and solidarity.3.- to create a real gender equality awareness.4.- to boost a entrepreneurship attitude among the students to improve these kind of skills.5.- to advise students and their families about different choices for their future, either professional or educational. School teachers know students and their capabilities to success better than anyone.6.- to create a bond between students, parents and school.7.- to establish a training plan for teachers and parents, making possible a proper use of the platform. |
